

## Homework 8 of Introduction to Analysis(II)

AM15 黃琦翔 111652028

April 12, 2024

1.  $f_x(0,0) = \lim_{x \rightarrow 0} \frac{f(x,0) - f(0)}{x} = \lim_{x \rightarrow 0} \frac{x \cdot 0(x^2 - 0^2)/(x^2 + 0^2)}{x} = 0$  exists. Also, we can easily get that  $f_y(0,0) = 0$ . Then,  $f_{xy}(0,0) = \frac{\partial f_x}{\partial y}(0,0) = \lim_{y \rightarrow 0} \frac{y(0^4 + 4 \cdot 0^2 y^2 - y^4)/(0^2 + y^2)^2}{y} = \lim_{y \rightarrow 0} \frac{-y^4}{y^4} = -1$ . And,  $f_{yx}(0,0) = 1$ . Therefore,  $f_{xy}(0,0) \neq f_{yx}(0,0)$ .
2. Since  $Df$  is continuous on  $S$  (close interval in  $R^p$ ),  $Df$  is Riemann integrable on  $S$ .
